# Hazardous Weather

Another round of thunderstorms is expected today across west Texas and southeast New Mexico. A few storms could be strong to severe but the greater threat will be locally heavy rainfall which could result in localized flash flooding.

A dry morning and afternoon for most locales will be replaced by another squall line by this evening. Severe wind and hail should be even less common than in recent days, but additional heavy rain at times will create minor flooding.

# Hazardous Weather

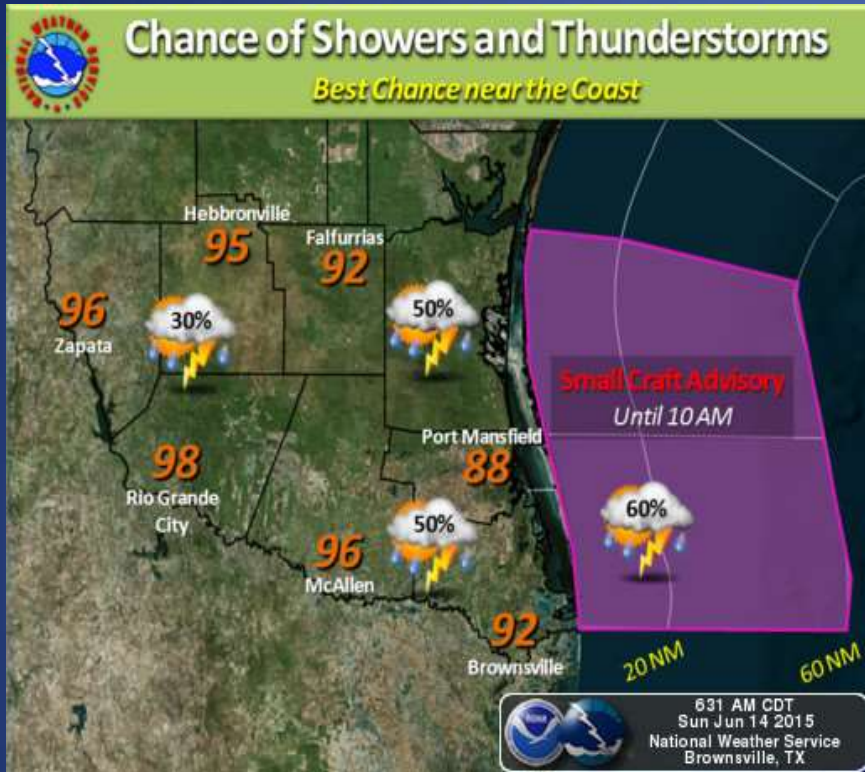

High temperatures today will be in the upper 80s to lower 90s with a 40 percent chance for rain across the region. Isolated to scattered showers and thunderstorms will again be possible; mainly in the afternoon and early evening hours. A strong thunderstorm could produce a damaging downburst. Heavy rainfall and lightning strikes will also be possible with any thunderstorm. Another complex of storms may move across areas west of Interstate 35 late tonight, but severe weather is not expected with this complex.

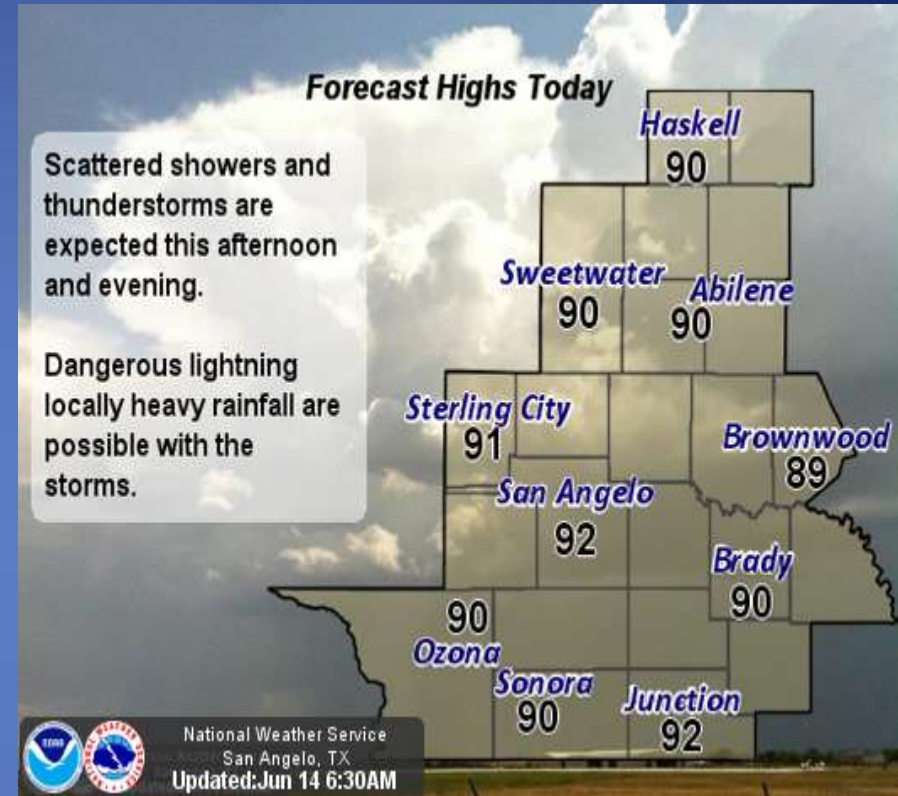

The combination of increasing moisture and atmospheric instability will contribute to scattered to numerous showers and thunderstorms Today. Locally heavy rainfall possible mainly over the Victoria Crossroads. Slightly lower maximum temperatures owing to greater atmospheric moisture. Small Craft Advisory conditions expected over the Coastal Waters this morning. Long period swell and moderate onshore flow will contribute to a high rip current risk Today along the Middle Texas Coast.

# Hazardous Weather

Precipitation chances increase this morning and afternoon, with the bulk of the moisture being along the coast and over the Gulf Waters. Temperatures will range from the lower to upper 90s for most areas, so be sure to stay hydrated this afternoon. Marine conditions should begin to improve late morning and afternoon as winds slowly subside.

# Hazardous Weather

## Flash Flood Watch

...For counties shaded in green until Midnight Tonight...

Rainfall amounts of 1 to 2 inches with isolated amounts over 3 inches possible.

- A Flash Flood Watch means that heavy rainfall may lead to Flash Flooding. *Flash Flooding is a very dangerous situation.*
- Ensure that you have multiple ways to receive warnings (such as radio/TV, NOAA Weather Radio, Smartphone apps, etc.)
- Monitor later forecasts and be prepared to take action should Flash Flood Warnings be issued.
- Remember:  
**TURN AROUND,  
DON'T DROWN.**
